Currently pursuing a career in Website Development

Education

University of Oregon's Coding Bootcamp   October 2020 – May 2020
Completed classes in front end (HTML, CSS, and JavaScript) and back end (Node, MySQL, and MongoDB) website development with individual and group projects.

Four completed projects include:
Entertainment Lists: A group project in which the team created a website to access a database to receive and display information about books, movies, and video games using three different APIs. The languages used were HTML, CSS, JavaScript, and JQuery.
The database's URL: https://github.com/kurtp23/entertainment-lists

Dungeons and Dragons Helper: This app is a step by step guide for players wanting to learn how to create a character for Dungeons and Dragons. By following the instructions on each page, players can experience the full character creation experience. At the end of the app, the player will have a printable character sheet that they can use for future gameplay and will also be able to search for this character later using the search bar in the homepage. Technologies used include: HTML, CSS, Google CSS Api, Express, MySQL2, Sequelize.
DnD's URL: https://github.com/Tapwater808/DungeonsAndDragonsHelper

Mood Ring: Mood ring is webpage were a user can log in with a Google account and check their mood using facial recognition. Based off the user's mood, it would display a "remedy" and save it to the user's profile via a database were it would display the user's last 5 moods and a chart. Technologies used were React, JavaScript, HTML, CSS, Axios, Bootstrap, Express, If-env, MongoDB, Heroku, React-bootstrap, React-google-login, React-router-dom, Facial Recognition Technology and Live Webcam (both Facial Recognition and Webcam's links can be found at the URL below).
Mood Ring's webpage: https://github.com/haywah27/mood-ring

Portfolio: Created an "about me" webpage that displays a portfolio of completed works. Additionally, it contains a contact query page for contacting the owner with the submitter providing email, name, and a brief message. The webpage required three separate HTML files and was built only using HTML and CSS and was later updated to React.
The portfolio's URL: https://github.com/gateskyle/Portfolio-In-React

Portland Community College, Rock Creek Campus   September 2017 – December 2018
Completed 38 credit hours toward associate's degree in web site development. Courses taken included programming languages HTML and C++, and required classes including algebra, english, history, and photography.

Technical Skills

Programming languages: Intermediate knowledge of HTML, CSS, JavaScript, JQuery, Node, MySQL, Sequelize, MongoDB, Mongoose, and React. Basic knowledge of Python, Ruby, and C++.

IDE: Visual Studio Code

OS Environment: Windows 7/10

Software Packages: Working knowledge of Microsoft Office (Word, PowerPoint, Outlook)

Computer Hardware: Built PC desktop computer system from components for programming and general use.
